Active Shooter First Care/Trauma Treatment Training

Respond to the Need for Emergency Trauma Care

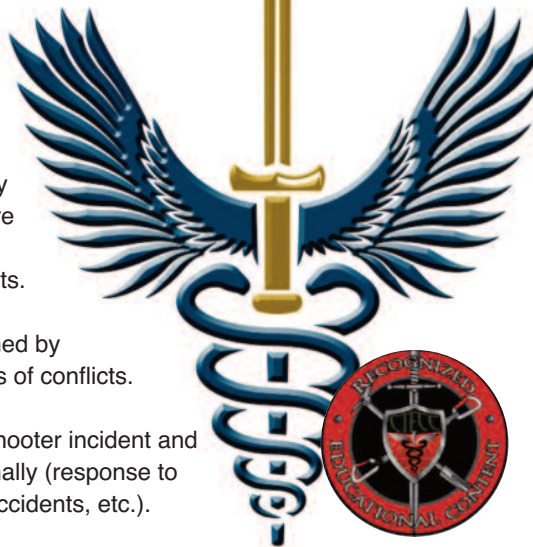

Active Shooter incidents are dynamic and evolve quickly. Many times, law enforcement and fire personnel will be delayed in rendering aid to the injured. Delays in trauma care affect survivability. The injured have the best chance to survive when your organization is trained to provide First Care.

PW's Active Shooter – First Care Course utilizes, adheres to, and teaches Tactical Emergency Casualty Care (TECC) according to the Principles of Guidelines Education from the National Committee for Tactical Emergency Casualty Care. TECC is evidence-based trauma care for civilian, pre-hospital care in high-threat environments.

TECC Guidelines are built on lessons learned by U.S. and allied military forces from 15 years of conflicts.

This training is essential during an active shooter incident and can be lifesaving personally and professionally (response to industrial accidents, car crashes, hunting accidents, etc.).

*Ordinary
citizens can
make a
life-saving
difference.*

ACTIVE SHOOTER FIRST CARE/TRAUMA TREATMENT TRAINING

TRAINING INCLUDES:

Assessment Techniques (RESCUE)

- Remote Assessment
(consciousness, breathing, bleeding)
